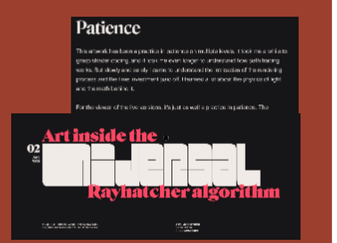
Color

https://meesverberne.com/
In this site creator used biege (HEX #D7C6AD) for a background and navy (HEX #22264B) for a font, which is complementary to each other. That makes it look pretty refreshing and that contrast between colors makes visitors of the Web-site spend more time on it and read most of information that is presented. Thanks to a low brightness of color on the background makes text be in the centre of visitor's attention and doesn't annoy eyes of visitors that look through the site.

https://www.hardikbhansali.com/
On this Web-site creator used black (HEX #000000), red (HEX #FD0E2D) and white (HEX #FFFFFF). Black is used for the background, so most part of the font is white with additing few elements of red which is quite contrasting for an eye what makes visitors pay more attention to the title and content in general.

Typography

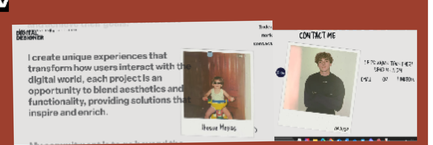
https://readymag.website/u3124455757/3302186/
Klavika and Px Grotesk font blends together realy good and interesting making eyes stick with headlines and roaming thro the body context. most of all i liked Klavika font cause of its strangeness yet interesting.



https://readymag.website/u1694583161/3629560/
Combination of thin, wide yet simple font with one that quite familiar is really famous and extravagant in its way too what makes the text and headings more clear for a reading.

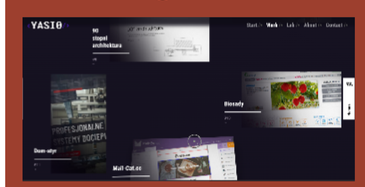
https://monokai.com/work/origin
I lik the font that was used in heading of the name of the project cause it's quite unique even though could be a bit complicated for reading

https://dversostudio.io/
Interesting using of font made with pixel which is preaty easy to read and you can tell that that site is about some kin of technical stuff like coding and development. Interesting font for the context is as well. It easy to read and looks preaty accurate for the style of this site.

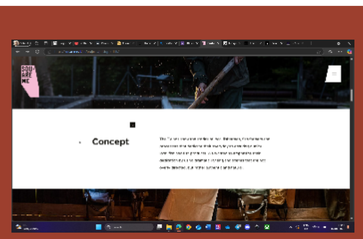


https://www.jhosuemesias.com/
Simple font is always the best desicion. Few elements of the handwriting style font adding more charm to this site.

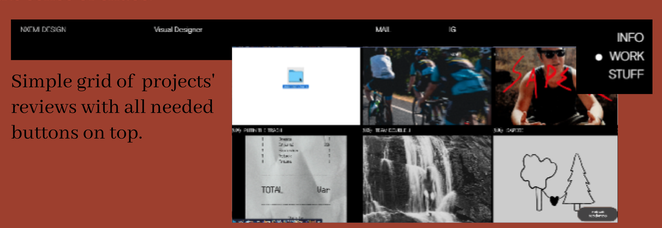
Layout



https://yasio.dev/
Menu options is on top of a web-site, all projects are putting rundomly but with numbers giwing the visitors fake sense of chaos.



https://squareme.si/en/projects/pristop-x-fish
Every sepaate part of information is on its own white rectangle surrounded by photoes and videos which while scroling you could see other part of it.



Simple grid of projects' reviews with all needed buttons on top.

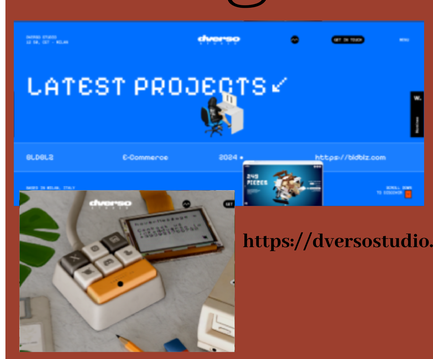
Navigation



https://dversostudio.io/

I love the idea of design of the options to contact the company showing us the little keyboard with media icons and screen which was giving the output of information we were expecting for. I could use this idea for navigation on the web-site or for menu.

https://readymag.website/u1694583161/3629560/

On all of these samples navigation parts like menu and needed information is located mostly on top of the web-site either in centre or in left corner

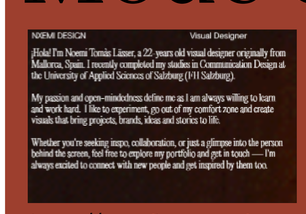
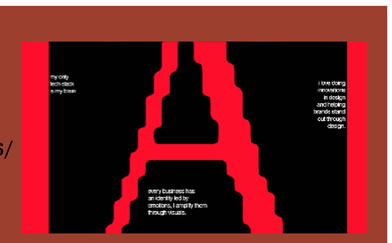
Mode of Address

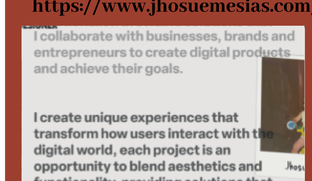


https://readymag.website/u3124455757/3302186/



https://www.hardikbhansali.com/

https://www.jhosuemesias.com/



On my opinion, better introducing of artist to the internet and visitors of the site is more frendly like the author is talking to friends through the screen. But i am not against the short and laconically which gives all the necessary information and nothing more showing more the nature of the designer.
